SARA MUNIR

Front End Developer

I am Sara Munir and I am interested in the position of Full Stack Web Developer at your company Mirego. I think I am the best fit for this position as i am well trained with upto date technologies and softwares related to webdevelopment.

I'm excited for this positon to start my career and to talk with you about this opportunity at your company. Your company values teamwork, and people who are passionate and authentic. This resonates with me as I am an excellent team player. I also am very passionate about coding as well as creating innovative digital products. I always strive to better myself.

Let me begin with my journey. I am a Front end Web developer. Before my Web Developer chapter, I was an architect where I used my complex problem solving and design skills to create aesthetically pleasing and yet functional solutions to meet the clients' needs. I left that role with a strong sense of visual design elements like color, typography, and layout with years of training as well as a strong systematic thinking ability, which allows me to focus on figuring out the big pictures before jumping into the details.

My transition to focus on the front end side of web development began by enrolling in Juno College's Web Immersive Bootcamp. Under this bootcamp I successfully completed projects which allowed me to showcase my skills in HTML, CSS, JavaScript and React. Along with the front end stacks, I also have skills and experience with back end technologies, such as Node Js (express), MongoDB, Mysql and Firebase.

because of my experience in architecture as well in customer care, i have honed in skills such as a good sense of effective communication Skills , Empathy, Open-mindedness Patience and also Decision-making. Along with these since work I have also developed a good sense of technical knowledge as I was able to work with different softwares.

I am very confident that my experience and knowledge will be a unique asset at your company. I would be ever so grateful if you could give me a chance to discuss further in more details.

Looking forward to hearing back from you,

Sara Munir
